# Utility Software Applications

## 01 Antivirus Software

is a program designed to detect and remove viruses and other kinds of malicious software from your computer or laptop. Malicious software - known as malware - is code that can harm your computers and laptops, and the data on them.

---

## 02 Backup Software

are computer programs used to perform a backup; they create supplementary exact copies of files, databases or entire computers. These programs may later use the supplementary copies to restore the original contents in the event of data loss; hence, they are very useful to users.

---

## 03 File Compression Tools

are a type of utility software. Furthermore, these tools help us to compress and decompress files. An important part of a computer is storage space, it is very important to maintain this storage. Therefore, we use compression tools to compress big files and decrease their size.
